Issue:

A very complicated task. We are typing in a link to get to the long quiz page currently. We need a button on the dashboard. An impossible to solve problem.

Solution:

Copy paste one of the other buttons on dashboard, add a new name, add page link.

Risk:

Remember to come back to this in future to conditionally render different button if quiz is done.

Ultimately the sheer significance of this task is a little overwhelming. After scouring the code, it looks good, and while I am a little hesitant, I am happy to merge it.
