## Action Items

### Topic

- ✓ **Main discussion:**
  - Barry suggested imported Leanna's csv into our database to use a dummy data
  - An important discussion around the viability of utilizing Tau's work. If it is usable, we should be able to take data out of this and bring it to our frontend
- ✓ **Conversation that needs to be had**
  - Files that are uploaded to Tau's database do not contain raw data (most of the data are missing)
  - Might need to fill it with dummy data which can be manually filled in
  - Using real data was not in our scope, we need to push back on this because this isn't something that we really have the time
  - Leanna wants the ability to upload csv files and see those shares in recommendation. Figuring out real data is not our problem
