Hi Leeanna Kohn-Hardy (Guest),

Just wanted to check if this CSV is something you would upload into Tau's database. If not, could you kindly provide a typical CSV file that you would normally use to upload into Tau's database.

📊 **file.csv**   ⋯

Hey **John Isaiah Sangalang** there are three types of templates I can load into Tau's database, as follows

Edited
On the url http://sdg.finappster.co.nz/ when I click on Company or ISIN I can add new company details using the attached xls called finappster-admin-upload-template-3

📊 **finappster-admin-upload-template-3.xlsx**   ⋯

On the url http://sdg.finappster.co.nz/ when I click on Offer I can add a new offer using the attached xls called finappster-add offer

📊 **finappster-add offer.xlsx**   ⋯

On the url http://sdg.finappster.co.nz/offer-detail I can add a new fund using the attached xls called finappster-fund-manager-upload-template

📊 **finappster-fund-manager-upload-template.xlsx**   ⋯
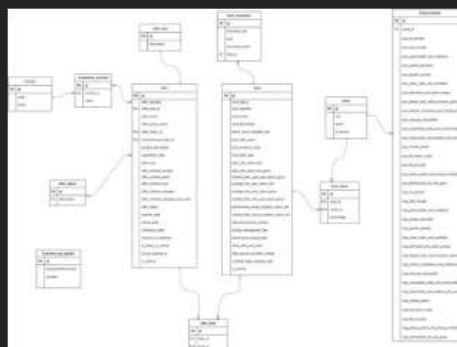

On the url http://sdg.finappster.co.nz/fund-detail I can update an existing fund using the attached xls called finappster-fund-manager-upload-template

📊 **finappster-fund-manager-upload-template (1).xlsx**   ⋯

If you're looking to understand the tables and datapoints that Tau used their ERD might help

Happy to chat through if that's easier - let me know?

John Isaiah Sangalang 10/03 6:20 pm
Sweet, thanks Leeanna Kohn-Hardy (Guest). Just a couple of questions, how would you calculate the positive and negative SDGs, is it possible to sum them up into one value? If not, how would you calculate it? This is because our algorithm requires the SDG to be in one value. Please kindly advise. Thank you.

Hey Finappster Sigma, can I get a dev job on your team? I think I am getting the hang of this React stuff... I could be the team gopher .... no, perhaps team *badger* 😊

React App

My Background image is a bit of overkill but the awesome thing about *React* is that once you grasp the structure of the functions and sections, it is so easy to ask Google for help about extra stuff I am curious about. The placement of the style attributes for the background and colours is quite intuitive; I think I am in ❤️ .....

Couple of things from me - re the SDG template - are you allowing for two use cases - 1) loading new company and details, 2) updating existing company with new details (that overwrites existing information)?

Also for our meeting next Tuesday I've had another meeting appear in my diary - should be done by 10,30 - are we able to meet after that please?

Thx heaps and have a great weekend 😊

Peter Scandle 18/03 7:39 pm

Hi Leeanna, so are we! 😊

Yes, the idea is that for either adding new company data or updating existing data you would use the same sheet. This seems like a better, simpler way to go than having two separate sheets, one for each.

No worries at all, I'll change the meeting time now.

This meeting should only take 15 mins but have booked longer if required.

The intent of this meeting is to show and discuss progress on current user stories / tasks, get feedback and get help with any issues encountered.
